Type of Outcome Measure: ASIA / ISNCSCI Scales			Total articles: 37
Author ID Year	Study Design	Setting	Population (sample size, age) and Group
Aidinoff et al. 2012	Development of SCI-ARMI and examination of its validity and utility	Loewenstein Rehabilitation Hospital, Raanana. Statistical Laboratory, School of Mathematics, Faculty of Exact Sciences, Tel-Aviv University, Israel	250 successive spinal cord lesion (SCL) inpatients treated in the Spinal Department of Loewenstein Rehabilitation Hospital between 2004 and 2010 N=226 (65%M, 35%F) Mean age 51.3(18.6) 42% tetraplegia, 58% paraplegia AIS-A/B/C/D at admission: 19%/2.7%/23.9%/54.4% 38.9% traumatic, 61.1% nontraumatic
Burns et al. 2011	Cross-sectional validation of WISCI II	Regional Spinal Cord Injury Center of the Delaware Valley	Patients who are able to ambulate >= 10m N=76, 79% male Mean age: 43.3±13.8 Mean post-injury time: 6.32±5.99 years 45% paraplegia, 55% tetraplegia AIS-A/B/C/D: 3%/1%/8%/88%
Catz et al. 2004	Development of instrument and preliminary comparative before-after study	Spinal department in a rehabilitation hospital in Israel	N=79 (60M, 19F) Mean age 46±18 33 tetraplegia, 46 paraplegia AIS-A/B = 27, AIS-C/D = 52 41 traumatic, 38 nontraumatic SCI
Cifu et al. 1999	Block-design, matching sample study	Level I trauma centers 1998-1995 participating in the National Spinal Cord Injury Model Systems	375 SCI subjects Age group 1 (18-34): 15 F, 85 M Age group 2 (35-64): 15 F, 85 M Age group 3 (65+): 31 F, 69 M
Cohen et al. 1998	Pre-Post test	Instructional course 1992 ASIA	N=106 SCI professionals assessing 2 case studies 39 physicians 31 PTs 15 OTs 15 nurses 6 other rehab professionals
Curt et al. 1998	Correlation study on a prospective cohort	SCI center in University hospital	N=70 Acute=36 M/F = 31/5 Median age = 40.5y (17-77) Chronic=34 M/F = 26/8 Median age = 32y (18-73) SCI C2-T1
Ditunno et al. 2007	Single-blinded, parallel-group,	6 regional SCI inpatient rehab.	N= 146 (114M, 32F) Mean age = 32 years (range 16 – 69 years)

	multicenter randomized clinical trial	centres	Incomplete spinal cord injury patients who had a Functional Independence Measure locomotor score for walking of < 4 on entry.
Ditunno et al. 2008	Prospective cohort study to demonstrate validation for the formulation of hierarchical rankings	Denmark, Germany, Italy, USA	N= 150 (USA = 112; Europe = 38) AIS A: Tetra = 18, Para = 41 AIS B: Tetra = 12, Para = 7 AIS C: Tetra = 22 , Para = 10 AIS D: Tetra = 32, Para = 8
El Masry et al. 1996	longitudinal	Spinal Injuries center and Dept of Orthopaedic surgery in Orthopaedic District hospitals	N=62 consecutive adult patients admitted within 7 days of acute SCI (04/83-09/92) M/F=48/14 Mean age=34.1y(16-76) at time of injury Follow-up=40.6m (1-119) SCI C+T=38, L=12, below L1=12
Fattal 2004	Metrological investigation Open study aimed at studying the feasibility and acceptability; Intermediate study aimed to assess inter-rater reproducibility; Prefinal study focused on construct validity.	Bouffard-Vercelli Centre, Cerbere, France	Open Study: n=33 (23 had undergone surgery) Intermediate Study: n=30 (10 had undergone surgery) (23 male, 7 female) Age: 32±13.3, range 17-72 years Prefinal Study: n=52 (41 male, 11 female) Age: 38.32±12.76, range 18-72 years Adults, complete motor tetraplegia, C5-C7 level, AIS A or B, at least 3 months post spinal cord injury, at least 3 months post surgery.
Fujiwara et al. 1999	Cross-sectional	Subjects recruited from National Murayama Hospital (1995-1997)	N=14 (12M, 2F) C6 complete tetraplegic patients Mean age: 30.7 (13~62) Mean time since SCI: 462 (169~1080) days
Graves et al. 2006	Retrospective medical record analysis	NSCID 2002 ASIA	N=6,116 AIS motor scores 80% male 48% paraplegia SCI
Harkema et al 2016	Prospective multicenter observational; NRS 13-item version	6 outpatient rehabilitation centers in the Christopher and Dana Reeve Foundation NRN	N=152 (123M, 29F) Mean (SD) age: 36 (15) Median (range) time since SCI: 0.9 (0.1-45.2) years 110 cervical, 42 thoracic AIS-A/B/C/D: 43/21/39/49 Physician-referred outpatients without progressive lesions above T11, capable of stepping using body weight support, with ability to wean off anti-spasticity medication Median (range) number of sessions of NRN-standardized locomotor training: 70 (23-520)
Hasegawa et al. 2014	Cross-sectional	Chubu Rosai Hospital, Nagoya, Japan	N=40 (37M, 3F) Mean age: 49.9 Mean post-injury time: 138.6 days AIS-D cervical incomplete SCI patients who can walk

			independently for $\geq 10m$
Johnston et al. 2005	Cross-sectional survey	New Jersey Outpatient SCI Center	N=107 (88M, 19F) Mean age 39.1(11.16) Median age 38.0 Mean post-injury time: 11.36(9.56) yrs Median post-injury time: 8.71 yrs Community-living traumatic SCI individuals AIS-A/B/C/D: 56.4%/20.2%/14.9%/8.5% Neurologic Category: Tetraplegia complete: 38.7% Tetraplegia incomplete: 15.1% Paraplegia complete: 37.6% Paraplegia incomplete: 8.6%
Jonsson et al. 2000	Inter-rater reliability	Dept PT and Neurology within Inpatients at Rehab Med Hospital 1992 ASIA	N=23 M/F= 15/8 C/T/L=12/6/5 Traumatic/non-traumatic=16/3 Complete/incomplete =3/20 SCI
Kalsi-Ryan et al. 2016	Multicenter, observational, longitudinal, cohort study	5 centers (7 sites) in Ontario, Canada	N=53 (48M, 5F) Mean (SD) age 49.6 (15.6) All acute SCI, 0-10 days post-injury AIS-A/B/C/D: 11/5/16/21 51 cervical, 2 thoracic
Marino & Graves 2004	Secondary analysis of prospectively collected data	Model SCI Systems center NSCID	N=4338 (3443M, 895F) People with traumatic SCI discharged between Jan. 1994 and Mar. 2003 Median age: 33 (IQR= 22~46) Median time from injury to rehab admission: 15 (IQR= 9~28) days Median time in rehab: 46 (IQR= 29~73) days AIS-A/B/C/D: 2049/511/655/1123 Neurologic category: Complete tetraplegia: 854 Incomplete tetraplegia: 1464 Complete paraplegia: 1195 Incomplete paraplegia: 825
Marino et al 2015	Repeated measures Studying the CUE-Test (CUE-T)	Outpatient rehab center	N=50, 36 male Mean age 48.1, SD=18.2, range 17~81 Neurological levels of injury: C2~T6 AIS-A/B = 20/50 AIS-C/D = 30/50
Marino et al. 1998	Cross-sectional survey	Regional Spinal Cord Injury Center	154 tetraplegic patients Avg. age = 37 years, injured for avg. of 8 years. 99% of subjects had neurological examinations within 2 years of completing study. AIS-A/B/C/D: 93/12/24/25
Marino et al. 2008	Inter-rate and intra-rater reliability study.	Inpatients and outpatients from the Kessler Institute for Rehabilitation.	N = 16 patients with SCI (2 inpatient, 14 outpatient) 10 men, 6 women, age range from 18-65 years N = 16 examiners (8 physicians, 8 physical therapists) > 2 years of experience in field of SCI
Marino et al. 2012	Cross-sectional study of the CUE-Test		N=30 (23M, 7F) Mean age 44.8

	(CUE-T)		Chronic SCI participants SCI participants with level of injury at: C4-6: 9 complete, 6 incomplete C7-T1: 7 complete, 4 incomplete T2-6: 4 complete, 0 incomplete
Morganti et al. 2005	Retrospective analysis	Rehab Hospital in Italy	Total sample: N=284 patients (184 M, 100 F) Mean age: 50.4±19.3 years Mean (SD) time since SCI at admission to spinal unit: 56.9(43.9) days Concurrent validity sample: N=76 "Traumatic or non-traumatic SCLs admitted between 1997-2001. Non-traumatic etiology was present in the majority of the patients (177/284): inflammatory (40), vascular (36), neoplastic (39), degenerative (62); traumatic lesions (107/284): car accident (38), motorcycle accident (15), sport accident (7), act of violence (6), suicide attempts (6), and accidental falls (31)."
Oleson and Marino 2014	Longitudinal, with convenience sample Studying the revised CUE-Questionnaire (CUE-Q; 5pt instead of 7pt scale)	"Data were obtained at admission and discharge from acute inpatient rehabilitation"	N = 46, 42 male Median age 44±21 yrs AIS-A = 14, B = 5, C = 8, D = 19 Right motor level: C1-C4 = 11, C5 = 25, C6 = 7, C7-C8 = 3 Left motor level: C1-C4 = 9, C5 = 27, C6 = 5, C7-C8 = 5 28 Caucasian, 18 African-American Etiology: fall = 18, MVA = 17, sports = 8
Ovechkin et al. 2013	Prospective cohort study	University of Louisville	N= 11 (3F, 8M) Age: 48 ± 19 AIS A: 4 AIS C: 1 AIS D: 6
Priebe & Waring 1991	Pre-Post test	Dept. of PMR 1982 and 1989 ASIA	N(Q1)= 14, N(Q2)=15 ("house officers", physician/faculty member) 5 unique SCI cases per Quiz, (1 st set of 5 used by Donovan et al ~'91 or '92)
Rudhe et al. 2009	Cross-sectional analysis. Part of larger international multicenter GRASSP study.	2 German centers and 1 Swiss center	N = 29 with traumatic or ischemic SCI Time since injury = 1-15 months (mean = 4.5 ± 3 months) Age= 19-81 years (mean = 50 ± 18 years) 16 males, 13 females ASIA-A/B/CD: 12/4/13
Saboe et al. 1997	Prospective longitudinal study	Tertiary care acute, rehabilitation hospitals and home settings.	N=160 (125M, 35F) Mean age at injury: 30±13 Admission ASIA-A/B/C/D/E: 97/14/7/37/5 Admission ASIA-A/B/C/D/E: 80/11/10/58/1 Lvl of Injury - Cervical/Thoracic/Thoracolumbar/Lumbar: 72/32/49/7
Savic et al. 2007	Prospective observational study to examine inter-rater reliability of motor and sensory	National Spinal Injuries Centre, Stoke Mandeville Hospital, Buckinghamshire	N=45 Mean age=40.3 Male=38 Female=7

	examinations performed by two experienced examiners	Hospitals NHS trust, UK.	Injury level Cervical=15 Thoracic=29 Lumbar=1 AIS A (complete SCI)=24 AIS B (sensory incomplete)=4 AIS C=4 AIS D=13 Time since SCI ranged from 3 months – 43 years
Scivoletto et al. 2013	Analysis of prospectively collected data Studying the ISNCSCI	SCI unit of a rehab hospital in central Italy	N=600, 440 male Mean age 50.35±18.8 Mean time from lesion 51.6±36.8 days Mean time in rehab 123.6±86.3 days 334 traumatic, 266 nontraumatic Lesion level: cervical 192, thoracic 289, 110 lumbar 233 AIS-A, 67 B, 158 C, 142 D
Scivoletto et al. 2015	Validation and further development of the SCI-ARMI formula using data from 6 countries	Spinal cord injury centers from 6 countries and the Statistical Laboratory, Tel-Aviv University, Israel.	N=661 (478M, 183F) Mean age at admission: 47.6±18.2 AIS-A/B/C/D: 214/55/144/248 patients 387 traumatic, 274 nontraumatic SCI Patients from: Israel = 233 (151M, 82F) Italy = 237 (183M, 54F) Portugal = 26 (17M, 9F) Spain = 30 (24M, 6F) UK = 58 (47M, 11F) US = 77 (56M, 21F)
Sisto et al 2016	Cross-sectional; NRS 11-item version	7 NRN outpatient rehabilitation clinics	N=350 (267M, 83F) AIS-C/D: 101/249 Mean (SD) age: 42 (16) Median (range) time since SCI: 0.9 (0.1-53.1) Incomplete SCI Presence of nonprogressive lesion above T11 No current inpatient rehabilitation No anti-spasticity medication use in the past 3 months Capable of stepping using body weight support Referred to PT by physician
Tester et al 2016	Prospective; testing the Neuromuscular Recovery Scale 14-item version	6 outpatient sites in the Christopher and Dana Reeve Foundation NeuroRecovery Network	N=72 (57M, 15F) completing 20 sessions of standardized locomotor training Mean (SD) age: 36 (15) Median (range) time since SCI: 0.7 (0.1-14.7) years N=45 longer than 6 months 44 cervical, 28 thoracic AIS-A/B/C/D: 17/10/20/25
van Hedel et al. 2006	Longitudinal study	European Multicenter Study of Human Spinal Cord Injury	N = 22 (18M, 4F) Mean age = 45.5 years (range 17 – 78 years) Incomplete spinal cord injury patients who were able to stand or walk within the first month after SCI.
Velstra et al. 2015	Prospective longitudinal multicenter study	5 European SCI centers; Recruitment	N = 74, 51 male Mean age 49, SD=18 SCI patients <= 10 days post-injury at enrollment AIS at 1 month: A=18, B=12, C=10, D=34

		between Jan 2009 ~ Jun 2011	69/74 traumatic SCI
Yavuz et al. 1998	Cross-sectional	Ankara Rehabilitation Center	N=29 (20M, 9F) Mean age 37yrs (range 14-66yrs) C3-T1 tetraplegic (18 complete, 11 incomplete). Consecutive patients of the Ankara Rehab Centre between May 1994 and January 1996. Mean time since injury to admission 20wks (range 2- 72wks).
1. RELIABILITY			
Author ID	Internal Consistency		Test-retest, Inter-rater, Intra-rater
Priebe & Waring 1991	No data available		Percent correct for '82 and '89 versions of AIS Sensory 82:14,71-100 Sensory 89: 83-100 Motor 82: 14,50-100 Motor 89: 77-100 Overall Kappa: 0.44 (82), 0.67 (89).
Cohen et al. 1998	No data available		Pre / Post % agreement Case 1: Neurological level 71-92 / 73-97 ZPP (zone of partial preservation): 91-95 / 90-93 Overall ASIA: 94 / 98 Complete injury: 96/100 Case 2: Neurological levels: 16-87 / 21-87 ZPP: 19-20 / 65/66 Overall ASIA: 58 /65 Incomplete injury: 95/97 Further revisions to 1992 and further training required.
Jonsson et al. 2000	No data available		Weak inter-rater reliability for 1992 version of AIS for incomplete SCI. Before/after standardization Kappa : PP (pin prick) scores 0.02-0.69 / 0.06-0.83 LT (light touch) scores 0.017-0.91 / 0.23-1 Motor scores 0.3-0.87 / 0.46-0.89 The majority of Kappas for PP were in the range of moderate and fair for most dermatomes. Similar for LT & MS (motor scores) except good-moderate. In general a standardizing assessment (i.e. training) involving all assessors (i.e. 4) improved level of agreement, except in classification of neurological level (Kappa 0.7-0.25).
Savic et al. 2007	No data available		Total motor scores: Pearson correlation: Patients who had motor examination performed by both examiners r=0.999 Patients remaining after exclusion of cases with complete paraplegia r=0.990 ICC: Patients who had motor examination performed by both examiners= 0.999

		<p>Patients remaining after exclusion of cases with complete paraplegia=0.998</p> <p>Total light touch r=0.994 ICC=0.997</p> <p>Pin prick r=0.978 ICC=0.988</p> <p>Analysis by myotomes The agreement for individual muscle testing of the 10 ASIA key muscles showed substantial to almost perfect agreement for all the muscles (weighted Kappa coefficient 0.649-0.993, P<0.01, depending on the muscle tested)</p> <p>Secondary analysis The agreement was substantial to almost perfect (weighted Kappa coefficient 0.785-0.981, P<0.05, depending on the muscle tested)</p> <p>Agreement in neurological level</p> <p>Kappa</p> <p>Motor level Right: 0.76 Left:0.68</p> <p>Sensory level Right:0.78 Left:0.70</p> <p>All P-values were P<.01</p> <p>For total ASIA scores, the agreement was slightly better for motor than for sensory scores, and better for light touch than for pin-prick scores, but still well in the “substantial” range for all three scores (all ICCs>0.96, P<.01)</p>																								
<p>Marino et al. 2008</p>		<p>Inter-rater:</p> <table border="1" data-bbox="836 1417 1458 1690"> <thead> <tr> <th></th> <th>All Patients</th> <th>Complete</th> <th>Incomplete</th> </tr> </thead> <tbody> <tr> <td>AIS light touch</td> <td>0.96^a</td> <td>0.99^a</td> <td>0.86^a</td> </tr> <tr> <td>AIS pin-prick</td> <td>0.89^a</td> <td>0.99^a</td> <td>0.69^b</td> </tr> <tr> <td>AIS total motor</td> <td>0.98^a</td> <td>1.00^a</td> <td>0.95^a</td> </tr> <tr> <td>UEMS (tetra)</td> <td>0.96^a</td> <td>n/a</td> <td>n/a</td> </tr> <tr> <td>LEMS</td> <td>n/a</td> <td>n/a</td> <td>0.98^a</td> </tr> </tbody> </table> <p>a- Excellent reliability(ICC ≥0.75) b- Adequate reliability(ICC 0.4<0.74)</p> <p>Intra-rater:</p> <ul style="list-style-type: none"> • Excellent AIS Light Tough ICC= 0.99 • Excellent AIS Pin-Prick ICC = 0.99 • Excellent AIS UEMS ICC = 0.98 		All Patients	Complete	Incomplete	AIS light touch	0.96 ^a	0.99 ^a	0.86 ^a	AIS pin-prick	0.89 ^a	0.99 ^a	0.69 ^b	AIS total motor	0.98 ^a	1.00 ^a	0.95 ^a	UEMS (tetra)	0.96 ^a	n/a	n/a	LEMS	n/a	n/a	0.98 ^a
