<p>Schilero et al. 2004 USA Pre-post Level 4 N = 10</p>	<p>Population: 5 tetraplegia (C4-C7), 2 complete, 3 incomplete, mean(SD) age:45(16) yrs, 17(8) yrs post-injury; 5 paraplegia (below T5), 2 complete, 3 incomplete, age:40(9) yrs, 19(10) yrs post-injury.</p> <p>Treatment: Inhalation of 0.3 mL of 5% solution of metaproterenol sulfate via nebulizer.</p> <p>Outcome Measures: Spirometry and specific airway conductance as measured by body</p>	<ol style="list-style-type: none"> In people with tetraplegia, inhaled metaproterenol resulted in significant increase in specific airway conductance and significant increases in FEV₁ and forced expiratory flow 25-75%. In people with paraplegia, inhaled metaproterenol resulted in significant increase in specific airway conductance although the increase was considerably less than that seen in 																																	

	plethysmography pre- and post-bronchodilator.	tetraplegia. There was no significant change in FVC, FEV ₁ and forced expiratory flow 25-75%.
Grimm et al. 1999 USA Pre-post Level 4 N = 15	Population: 9 tetraplegia (C4-C7) and 6 paraplegia (T9-L1), 4 complete & 11 incomplete, all male, age:25-61yrs, 4-32yrs post-injury Treatment: Increasing duration of exposure time to ultrasonically nebulized distilled water (UNDW). 5 participants responding to UNDW returned on a separate day for UNDW challenge following the inhalation of aerosolized ipratropium bromide. Outcome Measures: Spirometry, PD ₂₀	<ol style="list-style-type: none"> 8/9 tetraplegic participants (known histamine response positive) had a significant bronchoconstrictor response to UNDW (PD₂₀ 7.76 +/- 7.67 mL). 0/6 paraplegic participants (known histamine response negative) demonstrated a response to UNDW (PD₂₀ 24 mL). 5/5 tetraplegic responders to UNDW no longer responded after pretreatment with ipratropium bromide.
Singas et al. 1999 USA Prospective controlled trial Level 2 N = 25	Population: 25 tetraplegia (C4-C7): 10 complete & 15 incomplete, all males, age range:23-63yrs, 1-40yrs post-injury, 12 maintained on oral oxybutynin & 13 age-matched controls. Treatment: 6/12 oxybutynin participants were challenged with methacholine, & 6/12 with histamine; 7/13 control participants were challenged with methacholine & 6/13 with histamine. Increasing concentrations of aerosolized histamine or methacholine were administered. Outcome Measures: Spirometry, PC ₂₀ .	<ol style="list-style-type: none"> All 13 control participants (methacholine and histamine) and all 6 oxybutynin-histamine participants had a significant bronchoconstrictor response (PC₂₀<8 mg/mL). The oxybutynin-methacholine participants had a normal response to methacholine. (PC₂₀>=25 mg/mL).
Fein et al. 1998 USA Pre-post Level 4 N = 15	Population: 15 tetraplegia (C4-C7): 5 complete and 10 incomplete, all male, age range: 24-64yrs, DOI range: 3-31 yrs Treatment: Increasing inhaled concentrations of aerosolized histamine diphosphate. Responders to histamine were	<ol style="list-style-type: none"> 12/15 participants had a significant bronchoconstrictor response to aerosolized histamine (geometric mean PC₂₀ 1.27 mg/mL). There were no significant differences in FVC and FEV₁

	<p>retested on a separate day after pre-treatment with ipratropium bromide 72 mcg.</p> <p>Outcome Measures: Spirometry, PC₂₀.</p>	<p>values between responders and non-responders.</p> <p>3. All 12 participants initially responsive to histamine were again hyperresponsive at the time of rechallenge following ipratropium (geometric mean PC₂₀ 1.50 mg/mL).</p>
<p>Grimm et al. 1997 USA Prospective controlled trial Level 2 N = 24</p>	<p>Population: tetraplegia (C4-C7), all male, age range: 23-65, time since injury range: 2-29 yrs, 14 on chronic oral baclofen and 10 age-matched controls</p> <p>Treatment: Administration of histamine by inhaler in 14 baclofen participants and 10 controls. Administration of methacholine in 4 baclofen participants and 5 controls.</p> <p>Outcome Measures: Spirometry, PC₂₀.</p>	<p>1. 11/14 participants on baclofen and 8/10 control participants had significant bronchoconstrictor response to histamine.</p> <p>2. There was no significant difference in mean PC₂₀ between the baclofen and control groups (mean(SD) PC₂₀= 2.91(2.3) and PC₂₀ =2.18(1.9), respectively).</p> <p>3. The methacholine and histamine PC₂₀ were almost identical in controls. ¾ baclofen participants had significantly different responses to methacholine and histamine.</p>
<p>Almenoff et al. 1995 USA Pre-post Level 4 N=25</p>	<p>Population: 25 tetraplegia: 6 complete, 19 incomplete, all male, mean (SD) age: 43(3) yrs, 11(2) yrs post-injury.</p> <p>Treatment: Administration of 72 mcg ipratropium bromide by inhaler with spacer.</p> <p>Outcome Measures: Spirometry pre- and post-bronchodilator (improvement in FVC or FEV₁ >=12%).</p>	<p>1. 48% of participants had a positive bronchodilator response (6/10 smokers and 6/15 non-smokers).</p> <p>2. There were no significant correlations between the response to ipratropium and dyspnea at rest, smoking history, or sensory completeness of cord lesion.</p>
<p>Dicpinigaitis et al. 1994b USA Prospective controlled trial Level 2 N = 14</p>	<p>Population: tetraplegia (C4-C7); all male, age range 23-57 years, 6 on chronic oral baclofen and 8 controls</p> <p>Treatment: Administration of increasing concentrations of nebulized methacholine.</p> <p>Outcome Measures: Spirometry, PC₂₀.</p>	<p>1. 8 out of 8 control participants showed significant bronchoconstrictor response to methacholine (mean(SD) PC₂₀= 1.42(1.6)).</p> <p>2. 2 out of 6 baclofen participants had borderline to mild bronchoconstrictor response to methacholine.</p>

		4/6 baclofen participants did not respond to methacholine (mean(SD) PC ₂₀ = 15.0(9.1) for baclofen group). There was no correlation between PC ₂₀ and dosage or duration of baclofen.
Spungen et al. 1993 USA Pre-post Level 4 N = 34	Population: tetraplegia: 34 males, all motor complete, non-smokers' mean(SD) age:40(5) yrs, smokers' age: 48(3) yrs, 11.8(1.6) yrs since injury. Treatment: Inhalation of 2.5 ml metaproterenol sulfate inhalation solution. Outcome Measures: Spirometry pre- and post-bronchodilator (improvement in FEV ₁ >=12%).	1. 41% of participants demonstrated a significant response in FEV ₁ to inhaled metaproterenol (5/12 non-smokers and 9/22 smokers). 2. In the non-smokers, the correlation of FVC and FEV ₁ with level of lesion was positive and significant prior to administration of bronchodilator and became more significant post-bronchodilator. 3. In the smokers, FVC and FEV ₁ failed to significantly correlate with level of lesion.
